AP550e Label Applicator for Flat Containers

Apply labels at speeds of up to 500 containers/hour.

Key facts

▶ For flat surfaces, such as rectangular or many tapered bottles, boxes, packages, bags, pouches, lids and more

▶ No air-pressure supply required (no expensive, noisy and maintenance-prone air compressors)

▶ LED display with built-in counter

Optional Modification

For all unevenly shaped or very small containers that would be difficult to hold during labelling, we recommend a customised holder. You can make this at home with the appropriate materials or use our expertise and experience. Do not hesitate to contact us about the right AP550e holder for your container.

With the built-in LED display users can easily set-up variable spacings, save up to nine different container offsets and see the number of applied labels.

AP360e/AP362e Label Applicator for Round Containers

Apply labels at speeds of up to 1200 containers/hour.

Key facts

▶ For cylindrical containers, including round bottles, cans, jars and tubes

▶ Built-in spring-loaded pressure arm applies labels firmly

▶ Securely affix labels even on very small radius containers such as lip balm tubes

AP360e is the base model, which applies single labels at a time.

AP362e is the advanced model and applies two different labels with variable spacing to a single container, perfect for alternating labels as used on e.g. wine bottles. A built-in LED counter and memory for up to nine front-to-back label offsets is also included.

We're all different and so are the products we want our labels to stick on. Therefore, don't hesitate to contact us for optional modifications on the AP360e/AP362e to make it fit your needs.
AP-CODE Date Coder for use with AP360e/AP362e

This lot and date coding module prints directly onto containers & labels.

Key facts

▶ Connects seamlessly with AP360e/AP362e Label Applicator

▶ Immediately dry, waterproof, scratch- and UV light resistant black solvent ink adheres to glass, plastic, metal and labels

▶ Prints with 300 dpi and instantly while applicator applies label

AP-CODE Date Coder comes with a full-colour touchscreen for entering data and configuring date and lot codes and one black solvent ink cartridge. The print fields are free-format and can include letters, numbers and many symbols. It installs quickly with no tools or separate power supply required.

Print area of max. 12.7 mm x 279.4 mm
